# Outline

Lokta-Voletra!

Results

Real-World Factors

Implementation

Conclusion

## Predator-Prey “Relationship”<sup>1</sup>

---

<sup>1</sup>[www.alaskapublic.org,en.wikipedia.org](http://www.alaskapublic.org/en.wikipedia.org)

# Predator-Prey Model

Coupled ODE's describing behavior of predator & prey populations.

$$\frac{dM}{dt} = br_M * M - df_M * M * W \quad | \quad \frac{dW}{dt} = br_W * W * M - df_W * W$$

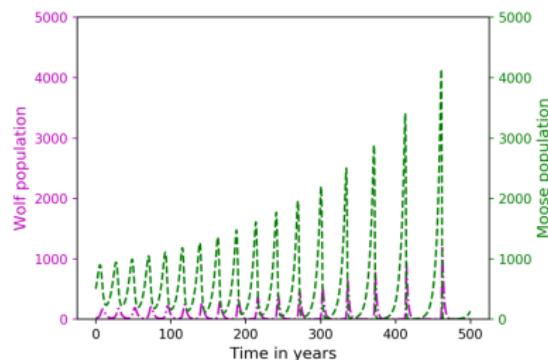

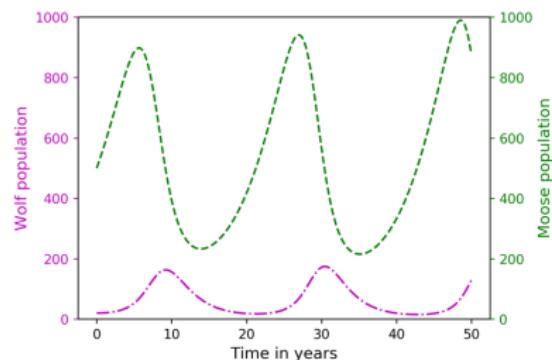

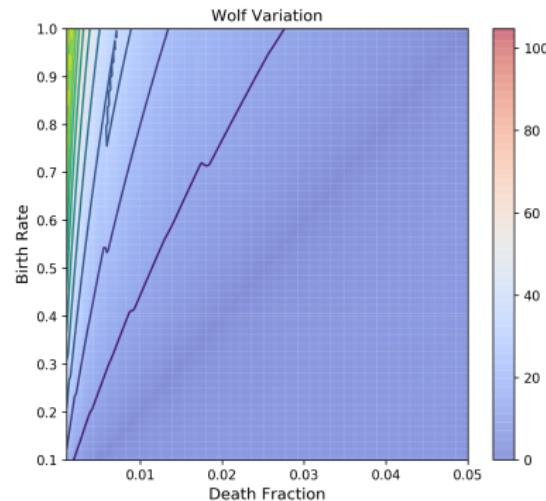

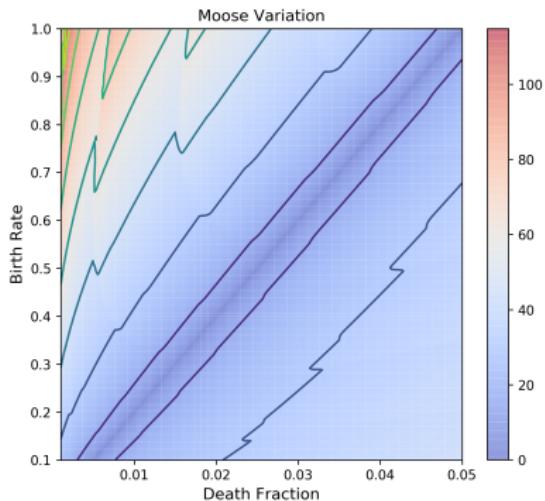

Figure: Stability analysis

# Sensitivity to Moose Birth and Death rates

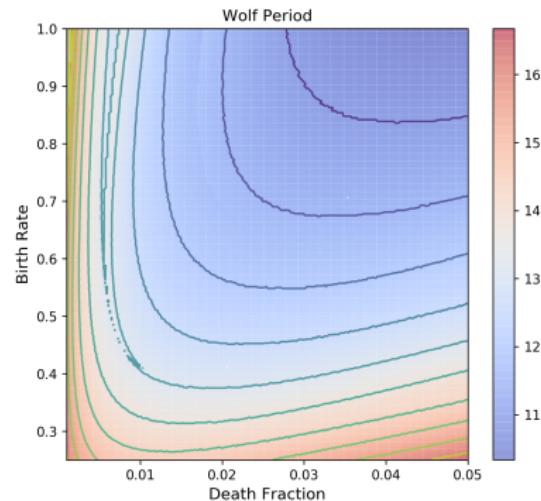

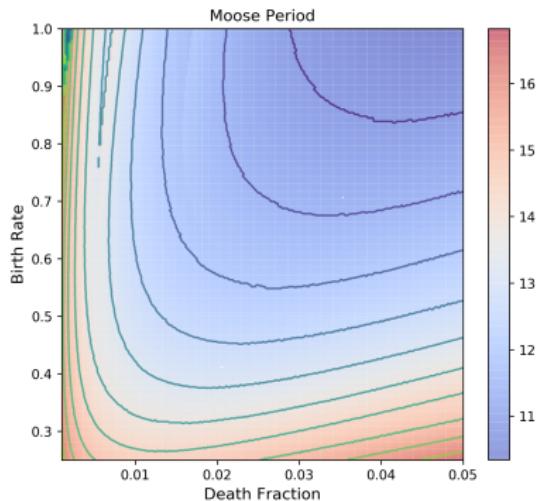

'Amplitude' plots for Moose and Wolf populations.<sup>2</sup>

<sup>2</sup>Square root of quantities visualized for enhanced contrast

# Sensitivity to Moose Birth and Death rates

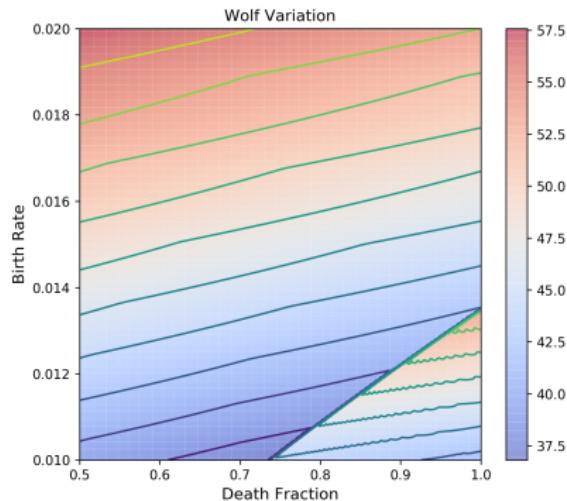

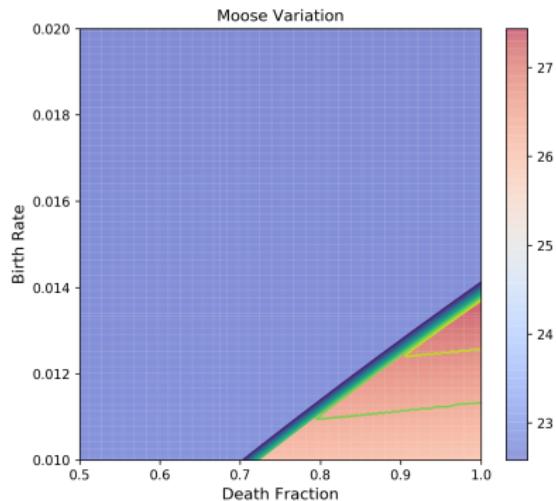

'Period' plots for Moose and Wolf populations.<sup>3</sup>

<sup>3</sup> Square root of quantities visualized for enhanced contrast

# Sensitivity to Wolf Birth and Death rates

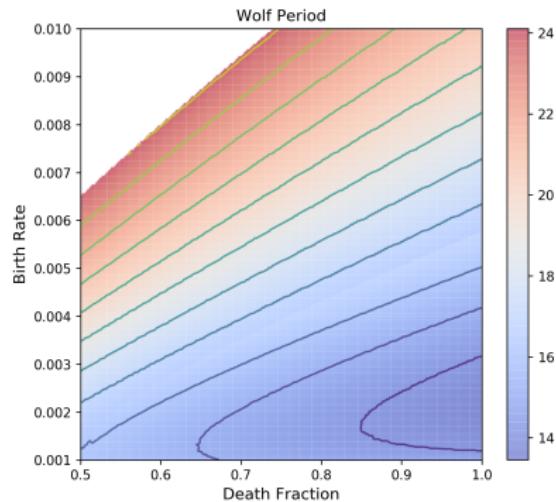

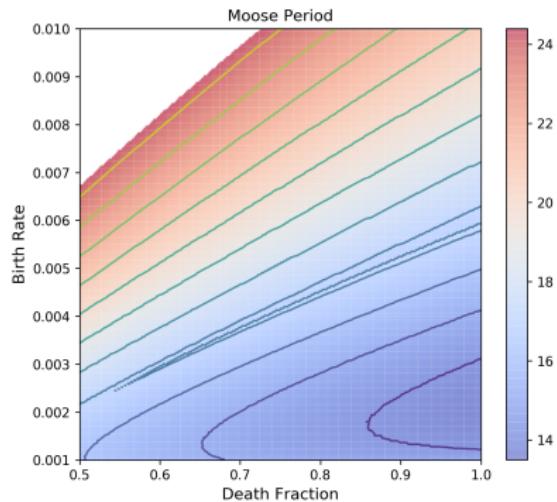

'Amplitude' plots for Moose and Wolf populations.<sup>4</sup>

<sup>4</sup> Square root of quantities visualized for enhanced contrast

# Sensitivity to Wolf Birth and Death rates

'Period' plots for Moose and Wolf populations.<sup>5</sup>

<sup>5</sup> Square root of quantities visualized for enhanced contrast

# Model Carrying Capacity

- ▶ What is carrying capacity ?
- ▶ Which plot ?

# Explaining real world data

- ▶ We can fit our model to real world data
- ▶ Which plot ?

# Language & Libraries!

- ▶ Libraries :
  - ▶ Numpy/Scipy : Arrays and Fit functions
  - ▶ Matplotlib : Visualization
  - ▶ Pandas : Dataframes
- ▶ How to HPC ?
  - ▶ Numexpr : Fast expression evaluation, to optimize code
  - ▶ Joblib : Parallel execution module
  - ▶ HDF5 : Structured I/O for scalable performance.
  - ▶ More science ! ?

## Conclusion

- ▶ And thus an important project was undertaken.
- ▶ Thank you to the organizers of PEARC19!
